

Business Requirements Document (BRD)

Claimable Pool Access & Auto Distribution Feature

Author:

- Akib Rahman
Falaq Food

1. Objective

Update the **ERP/CRM** → **Operation** → **My Assigned** page to ensure that **Ecommerce order data in the Claimable Pool** is visible and accessible only to agents from the **All Here team**.

The Claimable Pool data should follow the existing **auto-distribution rules** when eligible All Here agents become active.

Agents from **Telesales, Inbound, and other teams** should not be able to view, claim, or manage Claimable Pool Ecommerce orders.

2. Business Requirement

Currently, Ecommerce order data is available through the **Claimable Pool** under the My Assigned page.

The system should restrict this data based on the agent's team.

Only **All Here team agents** should:

- See the Claimable Pool tab/data.
- Claim Ecommerce orders from the pool.
- Manage claimed orders, including confirm, cancel, update, and other applicable actions.
- Receive orders through the applicable auto-distribution rules when they become active/eligible.

Agents from **Telesales, Inbound, and other teams** should not see the Claimable Pool tab or have access to its Ecommerce order data.

All other tabs and functionality under **My Assigned** should remain unchanged and continue to be available according to the existing rules.

3. Scope

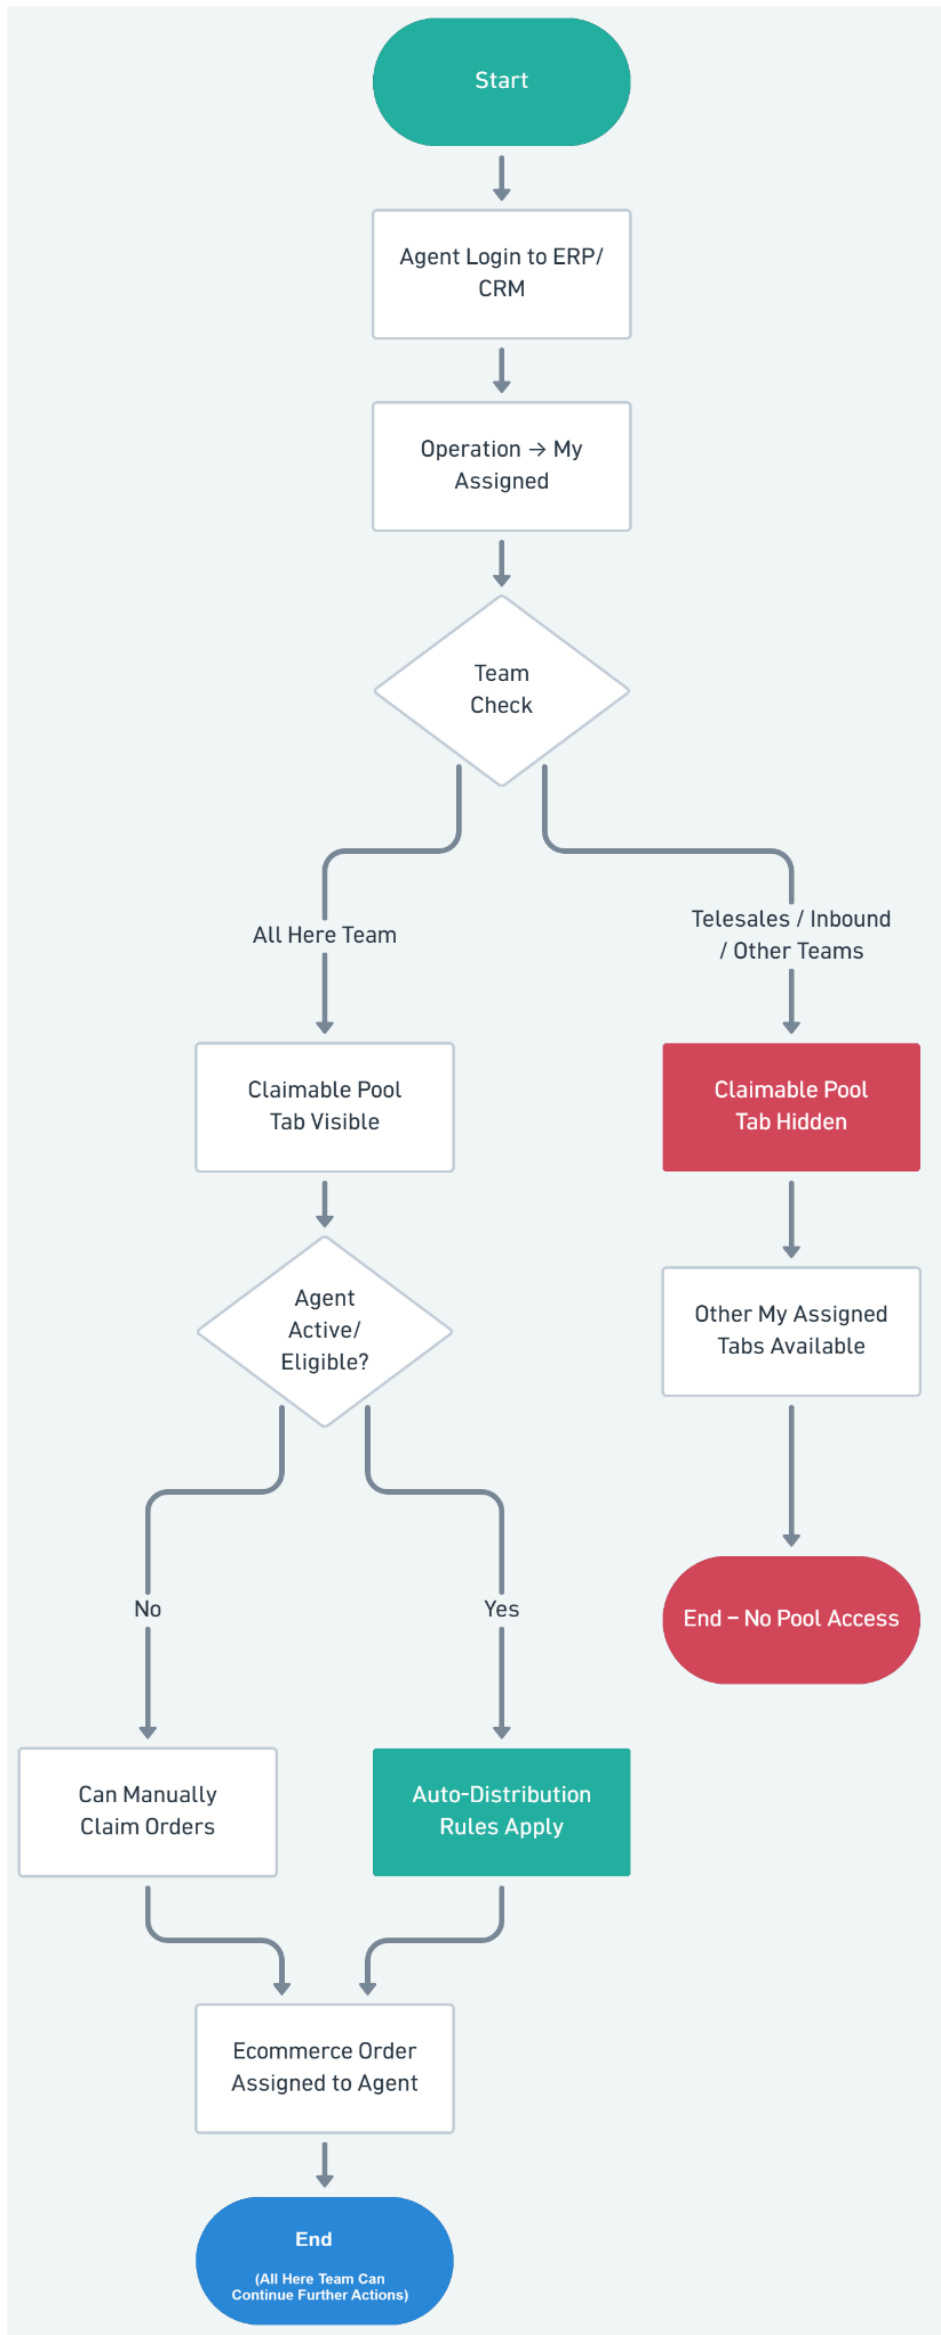

- Restrict the **Claimable Pool** tab to **All Here team** agents only.
- Hide the Claimable Pool tab from Telesales, Inbound, and other non-eligible teams.
- Allow only All Here agents to claim Ecommerce orders from the Claimable Pool.
- Ensure only eligible/active All Here agents are considered for auto-distribution.
- Apply the existing auto-distribution rules when All Here agents become active.
- Allow All Here agents to manage the Ecommerce orders assigned/claimed to them as per existing functionality.
- Keep all other **My Assigned** tabs and their existing access rules unchanged.
- Existing order management functionality should remain unaffected.

4. Expected Flow

Agent Login → Operation → My Assigned → Team-Based Access Check → All Here Team → Claimable Pool Visible → Eligible Active Agent → Auto Distribution / Claim → Manage Ecommerce Order

For Telesales, Inbound, and other teams:

Agent Login → Operation → My Assigned → Claimable Pool Not Visible → Other Existing Tabs Remain Available

5. Acceptance Criteria

- Claimable Pool tab is visible only to **All Here team** agents.
- Telesales agents cannot see the Claimable Pool tab.
- Inbound agents cannot see the Claimable Pool tab.
- Other non-eligible teams cannot see the Claimable Pool tab.
- Only All Here agents can claim Ecommerce orders from the Claimable Pool.
- Only eligible/active All Here agents are considered for auto-distribution.
- Ecommerce orders are distributed according to the existing auto-distribution rules.
- All Here agents can perform existing order actions such as confirm, cancel, update, etc.
- Non-All Here agents cannot access Claimable Pool data through the UI or direct access.
- Other tabs under My Assigned remain available to all applicable teams according to existing rules.
- Existing functionality and access for other My Assigned tabs remains unaffected.
- Existing Ecommerce order processing functionality remains unaffected outside the Claimable Pool access change.

6. Out of Scope

- Changes to existing auto-distribution rules unless required to enforce the All Here team restriction.
- Changes to Ecommerce order creation or order structure.
- Changes to order confirmation, cancellation, or update functionality.
- Changes to other tabs under My Assigned.
- Changes to team/agent creation or team management.
- Changes to Telesales or Inbound workflows outside the Claimable Pool access.
-

7. Business Outcomes

- Ensure Ecommerce orders are handled exclusively by the All Here team through the Claimable Pool.
- Prevent unauthorized teams from viewing or claiming Ecommerce order data.
- Ensure Ecommerce orders are automatically distributed to eligible All Here agents based on the existing distribution rules.
- Reduce confusion and prevent incorrect order handling across different operational teams.
- Maintain the existing workflow and access for Telesales, Inbound, and other teams.
- Improve operational efficiency by ensuring Ecommerce orders reach the appropriate team and available agents.
- Maintain clear separation of responsibilities between All Here, Telesales, Inbound, and other operational teams.
