Falaq Food

1. Objective

Enhance the **Main Dashboard** by introducing a **Date Filter** so users can view order, product, and customer summary data for a specific time period instead of only viewing lifetime data.

The filter will allow users to analyze dashboard information based on commonly used date ranges as well as a custom date range.

2. Business Requirement

Currently, the Main Dashboard is an independent page containing **4 metrics, 2 tables, and 1 pie chart** related to orders, products, and customers.

At present, the dashboard does not have any date filter, so all displayed information represents **lifetime data**. This makes it difficult for users to analyze recent or specific-period business performance.

A Date Filter should be added to the Main Dashboard with the following options:

- **Today**
- **Yesterday**
- **Last Week**
- **Last Month**
- **Last Year**
- **All Time**
- **Custom Date**

All metrics, tables, and the pie chart on the dashboard should update based on the selected date range.

3. Scope

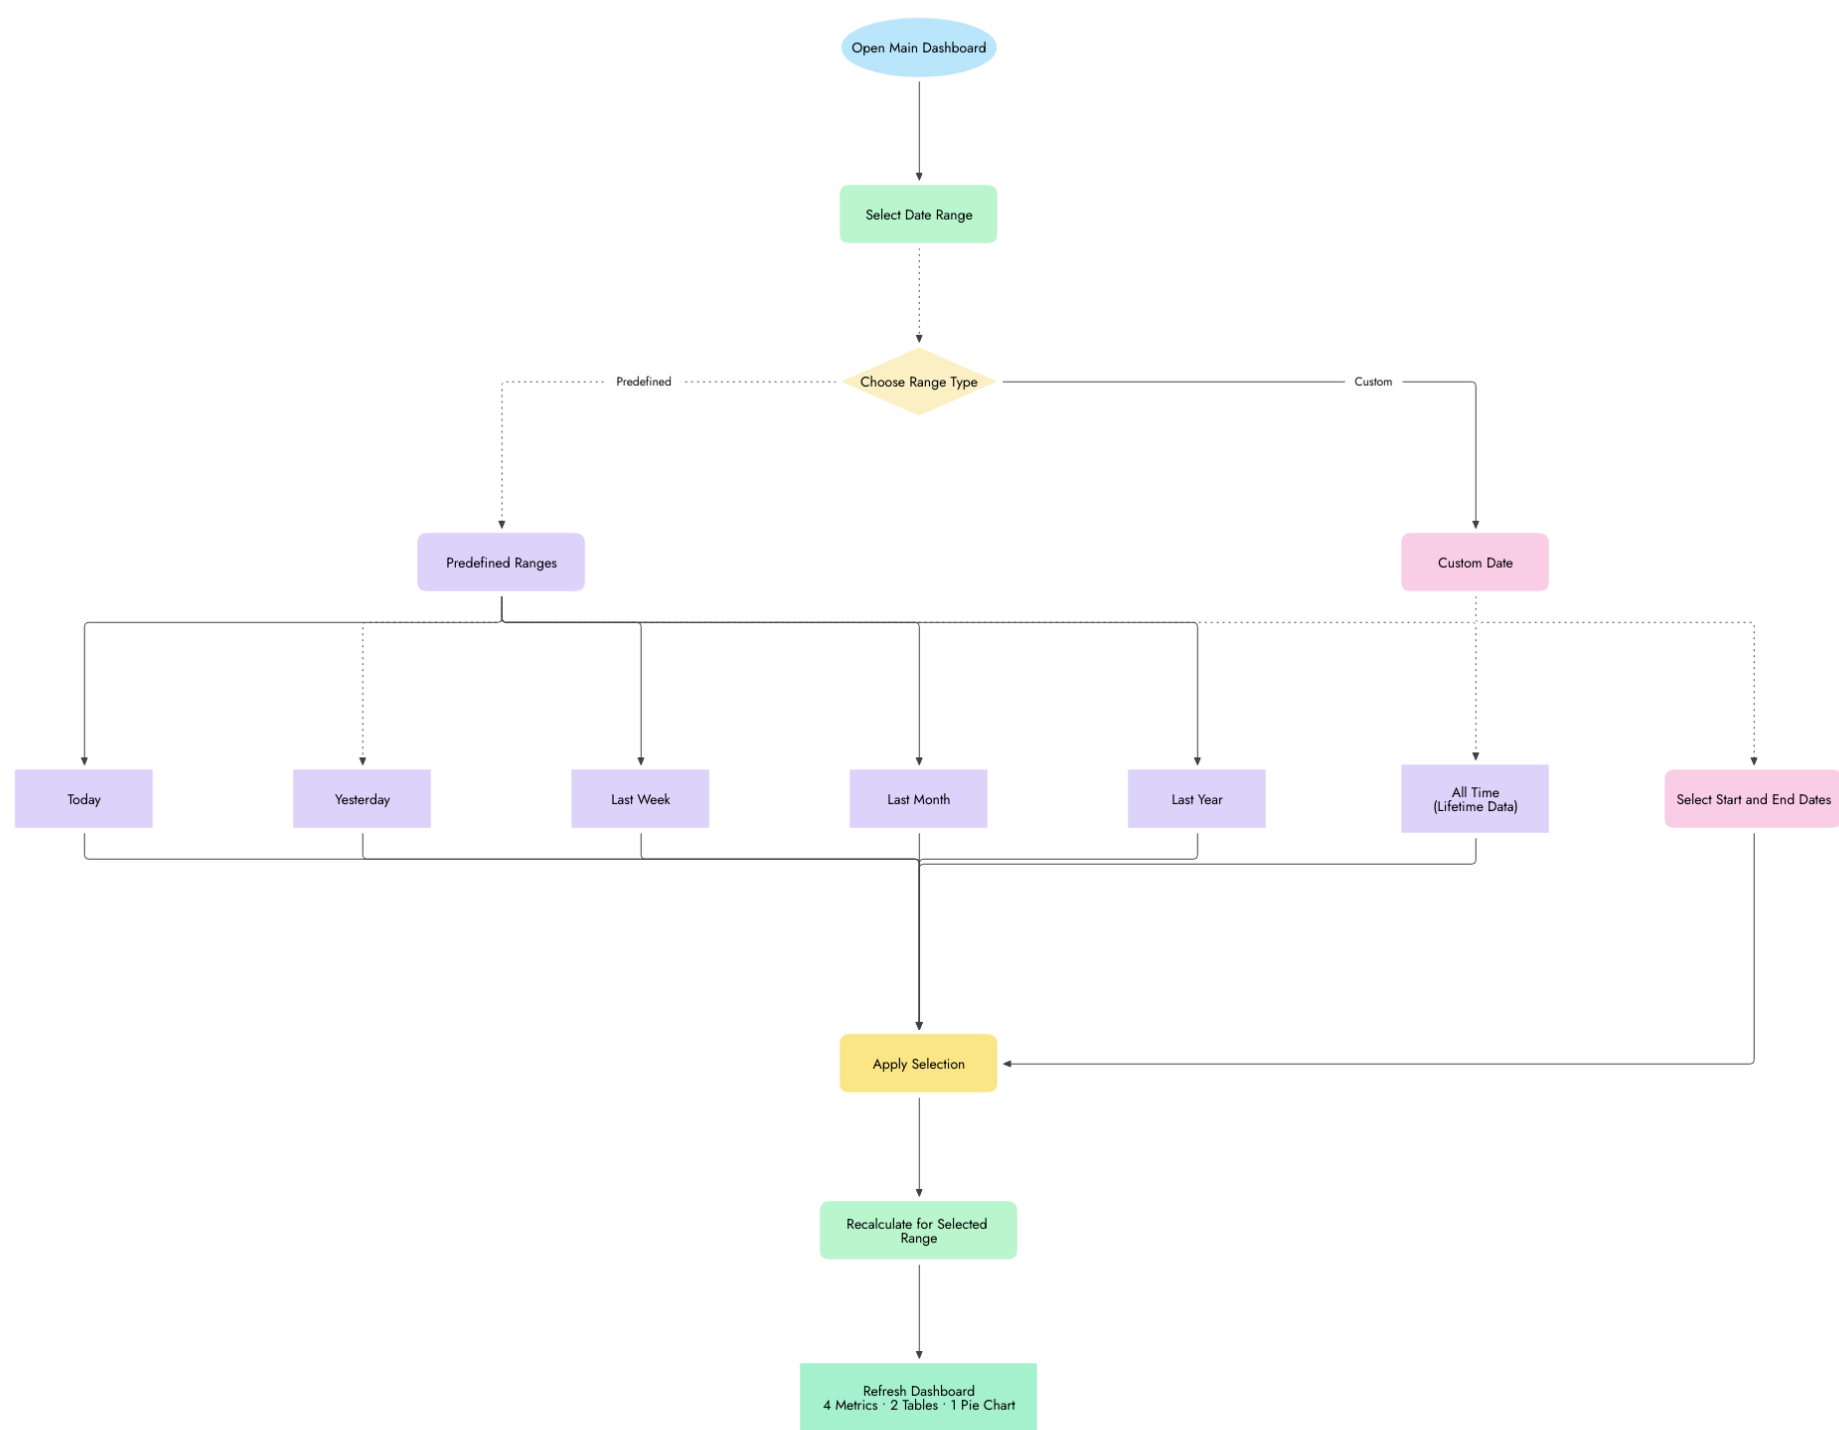

- Add a **Date Filter** to the Main Dashboard.
- Provide the predefined date options: Today, Yesterday, Last Month, Last Year, and All Time.
- Provide a **Custom Date** option for selecting a specific date range.
- Apply the selected date range to all **4 dashboard metrics**.
- Apply the selected date range to both **tables**.
- Apply the selected date range to the **pie chart**.
- Ensure all dashboard data is recalculated/refreshed based on the selected date range.
- **All Time** should display the existing lifetime data.
- The selected date filter should be clearly visible to the user.
- Existing dashboard functionality and visualizations should remain unaffected apart from the addition of date-based filtering.

4. Expected Flow

Main Dashboard → Select Date Filter → Select Predefined/Custom Date Range → Apply Filter → Refresh All Metrics, Tables & Pie Chart → Display Data for Selected Period

For Custom Date:

Main Dashboard → Date Filter → Custom Date → Select Start Date & End Date → Apply → Update Dashboard Data

5. Acceptance Criteria

- Date Filter is available on the Main Dashboard.
- Filter includes Today, Yesterday, Last Month, Last Year, All Time, and Custom Date options.
- User can select a custom start and end date.
- All 4 metrics update according to the selected date range.
- Both dashboard tables update according to the selected date range.
- The pie chart updates according to the selected date range.
- All Time displays lifetime data consistent with the current dashboard behavior.
- Changing the date filter refreshes all relevant dashboard data.

- Data shown across the dashboard is consistent with the selected date range.
- Custom date selection correctly includes data within the selected period.
- The selected date range remains clearly identifiable on the dashboard.
- Existing dashboard functionality and visual representation remain unaffected.
- Appropriate handling is provided when there is no data for the selected date range.

6. Out of Scope

- Changes to the existing dashboard metrics or their calculation logic, except where required to apply the date filter.
- Changes to the existing tables or pie chart structure.
- Changes to order, product, or customer data.
- Addition of new dashboard metrics or visualizations.
- Changes to the existing lifetime data calculation.
- Advanced filtering by customer, product, order type, or other attributes.

7. Business Outcomes

- Enable users to analyze orders, products, and customers based on specific time periods.
- Make the Main Dashboard more useful for day-to-day and period-based business monitoring.
- Reduce dependency on lifetime data for operational analysis.
- Provide better visibility into recent and historical business performance.
- Allow users to compare and analyze data across different periods using predefined or custom date ranges.
- Improve the overall usefulness of the Main Dashboard for management and business decision-making.
