Business Requirements Document (BRD)

HRM Module

Author:
Akib Rahman
Falaq Food

1. Objective

Introduce an **HRM module** within the Falaq Food ERP/CRM system to manage employee information, attendance, and leave-related activities from a centralized platform.

2. Business Requirement

The HRM module should allow authorized HR/Admin users to maintain employee records and manage employee attendance and leave information within the ERP.

3. User Story

As an authorized HR/Admin user,
I want to manage employee information, attendance, and leave through the ERP,
so that employee-related activities can be managed efficiently from a centralized system.

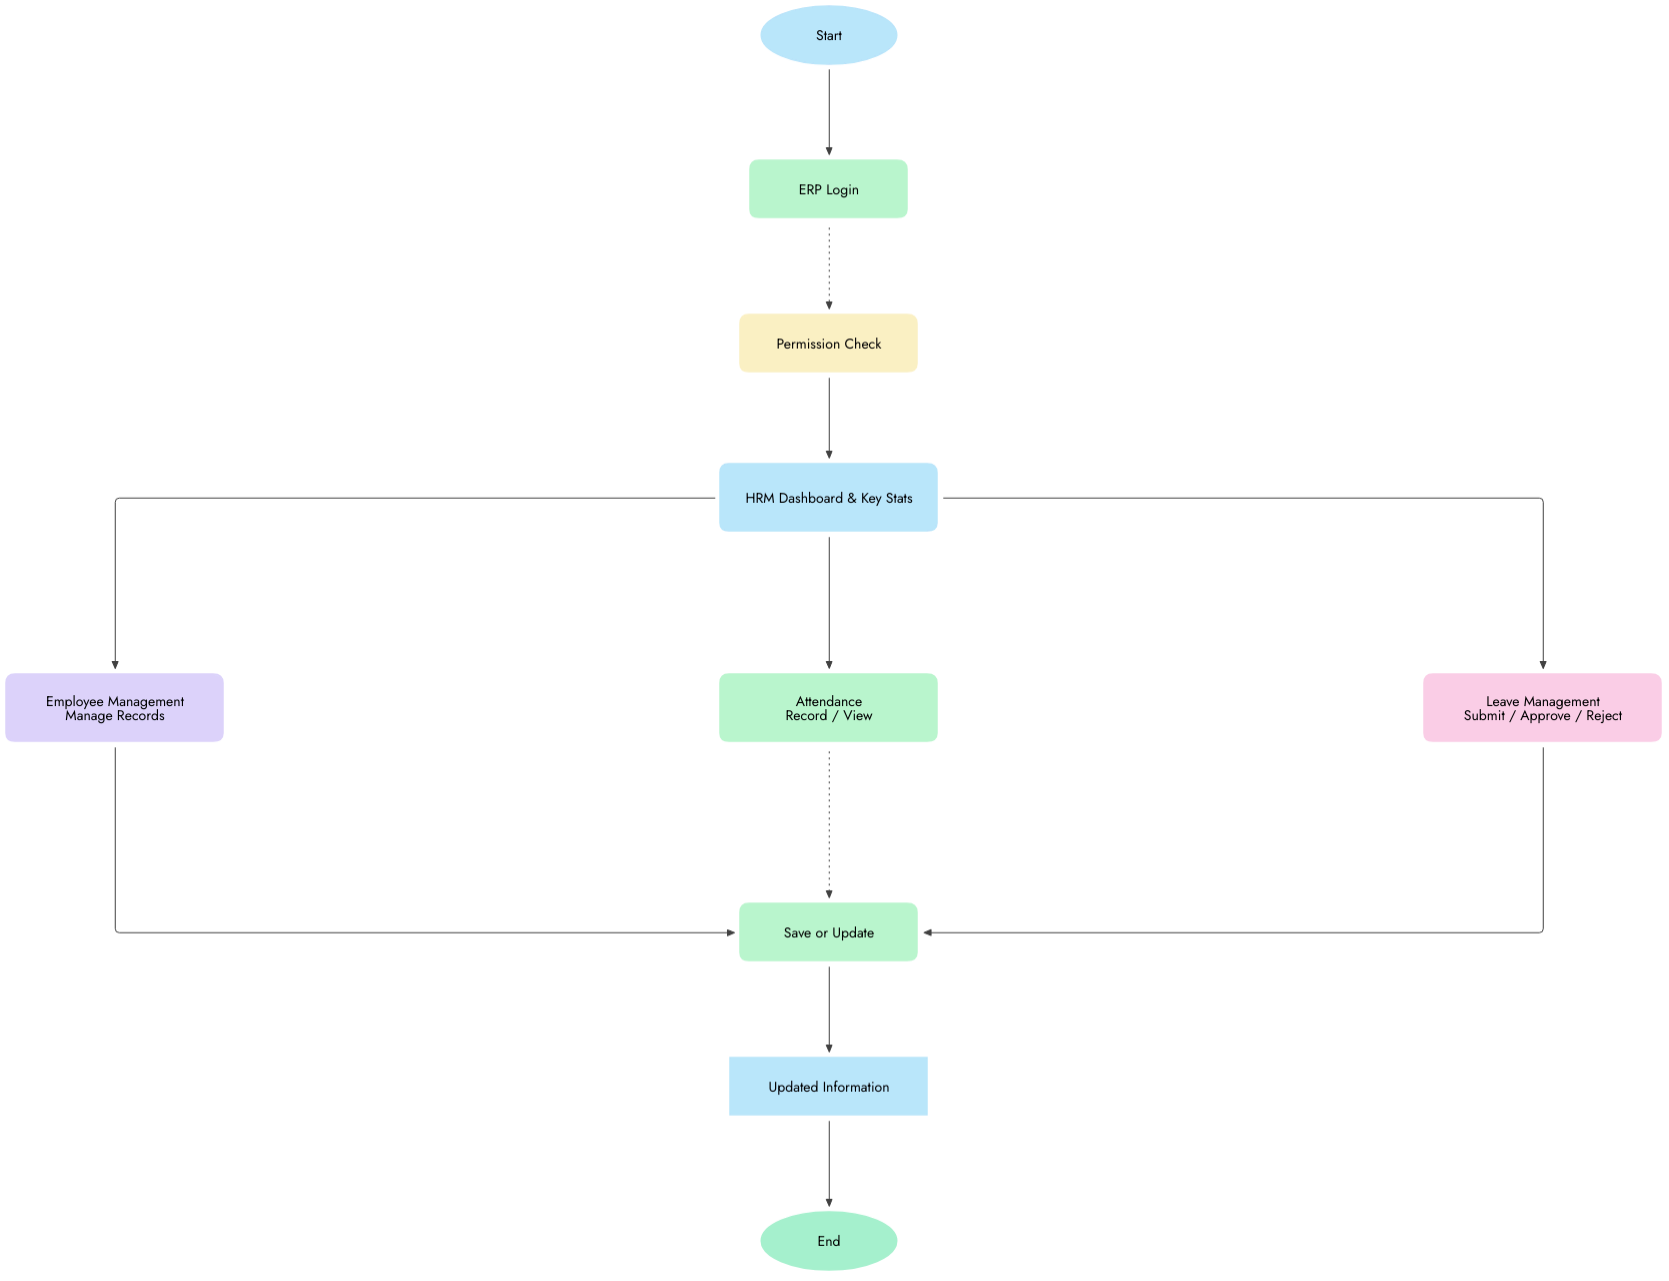

4. Core Features

- Add an **HRM** module to the ERP.
- Manage employee profiles and employment information.
- View employee list with search and filtering.
- Manage employee departments, teams, designations, and employment status.
- Record and view employee attendance.
- Track Present, Absent, Late, and other attendance statuses.
- Allow employees to apply for leave.
- Allow authorized users to approve or reject leave requests.
- View leave history and available leave balance.
- Provide HRM dashboard with key employee, attendance, and leave statistics.
- Restrict HRM features based on user permissions.

5. User Flow

ERP Login → HRM → Employee Management / Attendance / Leave → Perform Action → Save/Update → Display Updated Information

Userflow diagram:

6. Acceptance Criteria

- Authorized users can access HRM; unauthorized users cannot.
- Users can create, view, update, and search employee records according to their permissions.
- Employee department, team, designation, and employment status can be maintained.
- Attendance records can be created and viewed with the correct employee and date.
- Attendance status is displayed correctly.
- Employees can submit leave requests.
- Authorized users can approve or reject leave requests.
- Leave status, history, and balance are displayed correctly.
- HRM dashboard displays accurate employee, attendance, and leave information.
- Loading, empty, validation, and error states are handled properly.

7. Business Outcomes

- Centralizes employee information within the ERP.
- Reduces manual HR record keeping.
- Simplifies attendance and leave management.
- Improves visibility of employee availability and attendance.
- Provides HR/Admin with accurate employee-related information.
- Creates a foundation for future **Payroll, Performance Management, and Employee Document Management** features.
