Falaq Food

1. Objective

Enhance the **Create Order** → **Shipping Address** section by introducing a structured **City, Zone, and Area** selection mechanism.

The feature will allow users to select the shipping location through dependent dropdowns, making address selection more structured and reducing reliance on manually entered addresses.

2. Business Requirement

Currently, the Shipping Address section provides shipping charge options such as:

- **Inside Dhaka – 60 Tk**
- **Sub-Dhaka – 80 Tk**
- **Outside Dhaka – 120 Tk**
- Manual address input field.

The system should introduce three additional dependent dropdowns:

- **City**
- **Zone**
- **Area**

The dropdowns should follow a hierarchical selection flow.

Once a **City** is selected, the **Zone** dropdown should become available and display only the Zones associated with that City.

Once a **Zone** is selected, the **Area** dropdown should become available and display only the Areas associated with that Zone.

3. Scope

- Add **City, Zone, and Area** dropdowns to the Shipping Address section.
- City should be the first-level selection.
- Enable the Zone dropdown after a City is selected.
- Display only Zones associated with the selected City.
- Enable the Area dropdown after a Zone is selected.
- Display only Areas associated with the selected Zone.
- Allow users to select the appropriate City, Zone, and Area for the shipping address.
- Existing shipping charge options should remain available.
- Existing manual address input functionality should remain available.

- Existing Create Order functionality should remain unaffected.
- The selected City, Zone, and Area should be saved with the order where applicable.

4. Expected Flow

Create Order → Shipping Address → Select City → Zone Enabled → Select Zone → Area Enabled → Select Area → Enter/Complete Address → Create Order

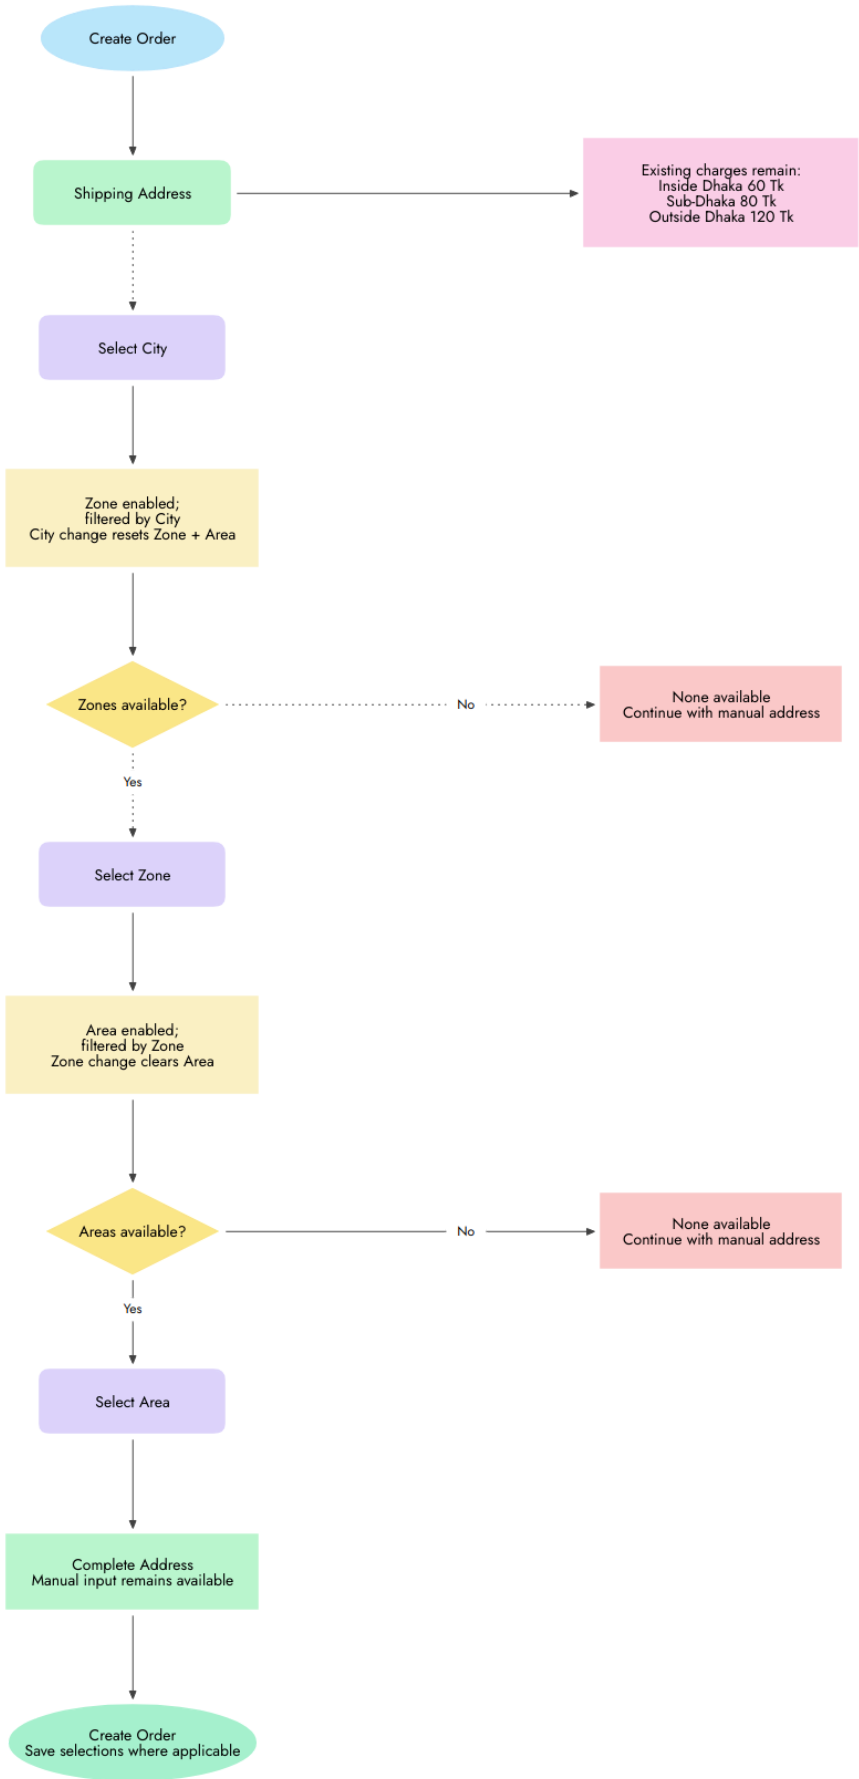

For example:

City: Dhaka → Zone: Dhanmondi → Area: Specific Area

If the City is changed:

Change City → Reset/Update Zone Options → Select Zone → Reset/Update Area Options

User Flow Diagram:

5. Acceptance Criteria

- City, Zone, and Area dropdowns are available in the Shipping Address section.
- Zone remains disabled until a City is selected.
- Zone displays only the Zones associated with the selected City.
- Area remains disabled until a Zone is selected.
- Area displays only the Areas associated with the selected Zone.
- Changing the selected City updates the available Zone options accordingly.
- Changing the selected Zone updates the available Area options accordingly.
- Previously selected dependent values are cleared/updated when their parent selection changes.
- Selected City, Zone, and Area are correctly associated with the created order.
- Existing Inside Dhaka, Sub-Dhaka, and Outside Dhaka shipping options remain functional.
- Existing manual address input remains available.
- Existing Create Order functionality remains unaffected.
- Appropriate handling is provided when no Zone or Area is available for the selected location.

6. Out of Scope

- Changes to existing shipping charge amounts or delivery pricing rules.
- Changes to the existing manual address functionality.
- Automatic calculation of delivery charges based on City, Zone, or Area unless separately required.
- Changes to the existing order creation workflow beyond the shipping address enhancement.
- Changes to the underlying City, Zone, and Area master-data management unless separately requested.
- Integration with external maps or geolocation services.

7. Business Outcomes

- Provide a more **structured and standardized shipping address selection** process.
- Reduce dependency on manually entered location information.
- Improve the accuracy and consistency of shipping addresses.
- Make it easier for users to select the correct delivery location.
- Reduce incorrect or mismatched City, Zone, and Area information.
- Create a structured location hierarchy that can support future delivery, logistics, and reporting requirements.
- Improve the overall efficiency of the Create Order process.
